

Business Process Re-engineering

What we do

We provide advice and guidance to support the often complex and multi-faceted thinking behind BPR, working with you to assess your current versus target business processes state while understanding your transformation strategy and vision.

Whether you are considering re-engineering your business processes to support your target operating model by reducing costs whilst bringing commercial agility to your operations, or replacing legacy technology for modern technology to improve your customer experience and operational efficiency, we can help you identify, prioritise and deploy your processes to improve them from the ground up.

Benefits

Organise around outcomes, not tasks

By having a solid grasp on the current state of your business processes you can ensure your efforts are directed towards the right organisational objectives and reduce the risk of future costly mistakes.

A simplified and streamlined operation will increase efficiency and maximise your return on investment on process improvement.

Greater efficiency and focused goals mean you can put more energy towards building relationships with your customers through streamlined, digitised processes. And, by building better lines of communication between cross-functional teams, information is passed through the internal silos, making your business more resilient to market changes.

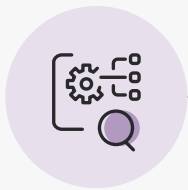

Our process

We understand that business process re-engineering is complicated and requires significant investment in time and resources.

We will work with you to assess your current versus target business processes state while understanding your transformation strategy and vision. We will produce a gap analysis and build a transformation roadmap, underpinned by change management

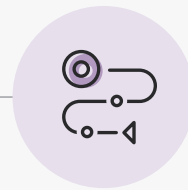

methodology and resource and frameworks such as business process modelling, with optimisation heatmap and optimisation strategy recommendations targeting business scenarios that are valuable to you. This will help you to see the value of your investment whilst assessing the impact on your organisation in terms of organisational design, business process changes, application portfolio optimisation, data, and technology.

Why NashTech

Our experienced teams provide a fresh insight, focused solely on what is best for your future business and unencumbered by internal bias. Coupled with our BPR consultants, NashTech can provide innovative technology teams for IT implementation, working with you and supporting you on your transformation journey.

We can manage your entire business process on your behalf, automating and optimising your business processes, or we can help provide you the head space to transform and re-engineer them yourself. Whatever option you choose, we will partner with you to help define your objectives, scope, requirements, process and implementation and ensure your digital transformation is a success.
