Who we are

NashTech are experts in technology, delivering smart solutions that solve business challenges and create value. Our award-winning teams apply deep expertise and passion to deliver complex IT projects globally.

Our approach brings together flexibility, reliability and accelerated product innovation to recommend and deliver outcomes that will meet and compliment your wider goals and ambitions. From technology advisory to robotic process automation, from application development to data driven insights, from customer experience to application maintenance, we have the solutions to deliver customer vision.

What we do

We deliver digital solutions utilising our agile, solution-focused approach, leveraging mainstream and emerging technologies to build robust, scalable and secure digital solutions.

As a trusted partner, we work in close collaboration with you to ensure you realise the value of your software earlier.

A surge of investment on the journey to achieving digital excellence

Where investment and magic meet

New products, new services, new ways to engage with customers, staff and suppliers have all become priorities and for many organisations it is fundamentally changing the way they view technology. Investment in digital continues to grow, both in technology and systems and the people needed to deliver the vision. It is all focused on getting closer to the customer and transforming business value.

Featured solutions

Digital strategy development

Working with customers to develop solutions that seamlessly support the integration of acquisitions as well as support organic business growth. Enabling significant competitive advantage through eCommerce, core administration processing and timely and comprehensive data insight and analytics results in a sound digital strategy development that produces the right solutions to deliver your vision.

Robotic process automation

Using computer vision and machine learning technologies to boost efficiency, expand capabilities and allow employees to focus on more high value tasks. Deliver superior accuracy by reducing dependence on human error.

Platform modernisation

Reusing and enhancing existing systems whilst building the new application around it to encapsulate required functionality and business critical. Solutions include lifting and shifting the hosting or moving hosting entirely to the cloud.

Cloud migration

Migrate legacy systems into new scalable platforms that reduce costs and allow room for growth. Add significant cloud-based functionality to original platforms.

A trusted partner

Our centres are ISO 27001 accredited. We protect your information as if it were our own.

Robust governance

Our quality management system (QMS) underpins everything that we do. Our quality assurance service provides end-to-end support across the entire software lifecycle and at all stages of development, from concept to release and beyond.

Digital safety and IP

We have 20+ years' experience working within the regulatory environments in which warehouses, freight and distribution companies operate. We always provide solutions that adequately mitigate risks for data security breaches and are clear about ownership of IP.

Expert onshore-offshore engagement

Our engagement model is designed specifically to meet the challenges of international software development. We successfully deliver projects using an onshore-offshore model where you have a locally based engagement manager, plus an offshore project manager and business analyst.

Our customers

"I am delighted by all that has been delivered and how NashTech, my internal teams and our other business partners have collaborated to deliver on our digital strategy. We have recently committed to a long term partnership with NashTech. We see this as an extension to the relationship and our own Atlanta digital capabilities, expanding our engagement into other technical areas where we can capitalise on their expertise."

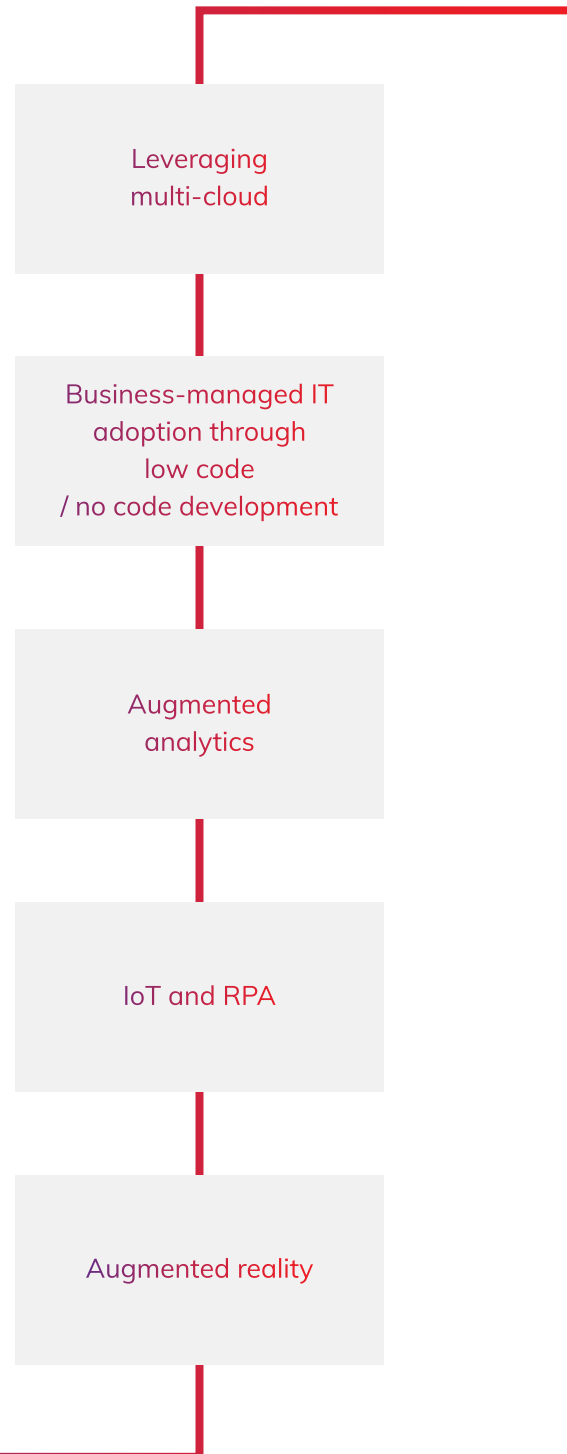

James Fairhurst

Chief Information Officer, Atlanta group

Emerging technology and future trends

Digital is woven throughout every business unit and function in every business across the globe. We are seeing the following trends and priorities for organisations on the journey to digital excellence:

We are experts in technology, delivering smart solutions that solve business challenges and create value. Our award-winning teams apply deep expertise and passion to deliver complex IT projects globally.
